Tropical Renewable Energy appointed authorized reseller of eGauge Systems

Kingston, Jamaica, April 16, 2024 // Tropical Renewable Energy, a majority owned subsidiary of Tropical Battery Company (JSE:TROPICAL), has been appointed an authorized reseller of eGauge Systems.

Based in Boulder, Colorado, eGauge is one the world's leading providers of technologically advanced energy monitoring systems for residential and commercial use. The company's hardware and software systems enable energy consumers and companies operating in the renewable energy and energy efficiency segments to monitor energy usage data in real time and generate reports.

Energy demand and consumption data are key inputs used in modeling the solar power and energy storage systems designed, installed, monitored, and maintained by Tropical Renewable Energy in Jamaica and the Dominican Republic.

"We have been utilizing eGauge technology in our own renewable energy installations with great success over the past decade and are pleased to be able to offer the full suite of eGauge products and services to renewable energy installers and end users in Jamaica, the Dominican Republic and across the Caribbean as a distributor of this cutting-edge technology," commented Tropical Renewable Energy CEO Oliver Hill.

"The addition of eGauge to our portfolio of renewable energy products and services enhances our offering and will help ensure Tropical Renewable Energy customers and installation partners have the best tools at their disposal to design and monitor solar power and energy storage systems to optimize efficiency and reduce costs," Hill added.
